## Lunati® Signature Series Crankshaft & Rod Kits

**Olive Branch, MS** – Lunati® is now offering its premium line of internal engine components in one box with the introduction of Signature Series Crankshaft & Rod Kits.

A Signature Series Crankshaft is the strongest crank found anywhere. It is constructed from non-twist, aircraft-quality 4340 forged steel and has been proven to withstand more than 1,500 horsepower. Standard design features include gun-drilled mains, lightened rod journals, micropolishing and a windage-reducing, contoured-wing counterweight profile. Each crank is also pulsed-plasma nitride heat-treated for increased strength and durability.

Signature Series Connecting Rods complete the package. These 4340 alloy billet steel I-Beam rods are race-ready upon purchase. They are 100-percent sonic-tested and magnaflux-inspected. Each one is heat-treated, manufactured to extremely close tolerances and weight-matched to +/- one gram. Every aircraft-quality, mill-certified connecting rod is precision-machined with close attention to detail, and is ideal for circle track, drag race, off-road or marine applications. They suit all naturally aspirated and forced-induction engines that are subject to high engine speeds and stresses.

Lunati Signature Series Crankshaft & Rod Kits are available for Small and Big Block Chevys, GM LS applications and Small Block Fords. Big Block Ford applications are coming soon.

**Part Numbers:** Application Specific    **Price:** \$2,979.97 – \$3,372.95
